

Integrated solutions from construction to commissioning.

Baker Construction and Dugan & Meyers deliver integrated construction solutions for the full lifecycle of water and wastewater infrastructure. With more than 150 successful projects, we bring specialized expertise to water and wastewater treatment plants, pump and lift stations, storage tanks, and more — whether you're building from the ground up or upgrading a legacy system.

Backed by a national workforce of 8,000+ highly skilled craftworkers and experts, we combine deep bench strength with the flexibility to work as your general contractor, design-builder, construction manager at-risk (CM@R), or specialty subcontractor. The result: tighter control, less risk, and outcomes you can count on.

Turnkey capabilities for every phase.

We plan early, build smart, and hold ourselves to the highest standards for safety and quality.

That focus, combined with deep process experience, helps us mitigate risk, control schedule and costs, and bring critical infrastructure online on time. From complex tie-ins to strict regulatory requirements, we have the expertise to anticipate and overcome project execution challenges to deliver with precision.

Preconstruction & Planning

- Feasibility Reviews + Early Budgeting
- BIM + 3D Modeling Integration
- Constructability + Logistics Planning
- Long-Lead Procurement Strategies

Sitework & Structures

- Excavation + Backfill
- Underground Utilities + Duct Banks
- Foundations + Equipment Pads
- Site-Specific Formwork + Layout
- Concrete Structures + Tanks + Containment Structures
- Buildings + Architectural Finishes

Treatment & Conveyance

- Aerators + Clarifiers + Sludge Thickeners
- Filtration Trains
- Yard and Process Piping
- Chemical Feed Systems
- Electrical + Instrumentation + Controls
- Pump Stations
- Solids Handling

Commissioning & Turnover

- Equipment Setting + System Testing
- Start-up Sequencing + Commissioning Support
- Final System Turnover + Warranty Coordination

Self-performance strength that delivers.

By self-performing critical scopes — including concrete, excavation, piping, and equipment setting/installation — we reduce dependencies and handoffs, control quality, and drive schedule certainty. Our teams manage other subcontracted scopes in an integrated execution program.

Let's build
what's next.
