

Critical solutions for complex plants.

**Delivering the certainty needed to extend plant life,
support uprates, and execute restart programs.**

Aging infrastructure, license-extension programs, plant uprates, and restart initiatives all place increasing demands on existing nuclear facilities. Baker helps owners execute critical concrete and civil work safely and efficiently while protecting schedules, minimizing operational disruption, and supporting long-term asset performance.

Experience = Certainty in Active Nuclear Facilities

Baker Construction is a concrete and civil construction company built for complex nuclear environments, not a traditional nuclear contractor trying to self-perform concrete.

We combine the rigor required for nuclear environments with extensive self-perform capabilities, responsiveness, and industrial construction expertise to execute critical work efficiently and cost-effectively.

The Baker Difference

Our model combines the strengths of a national builder with the focus of a specialized contractor:

- Early contractor engagement and construction-forward approach that optimizes budgets and reduces execution risk
- Integrated project delivery backed by national resources and workforce scalability
- Self-perform control that provides accountability and limits coordination challenges
- Scalable quality systems that eliminate bureaucratic layers and operational complexity
- Strategic partnerships that bring specialized expertise to complex project challenges

Nuclear Experience. Expert Guidance.

With more than 20 years of experience working on nuclear projects, Baker delivers concrete, civil, structural restoration, and specialty repair scopes in some of the industry's most demanding environments.

Our Integrated Project Accelerator Program helps owners develop an executable strategy that minimizes risk, controls cost, and accelerates project readiness. By engaging early, we can help owners understand the need, evaluate options, quantify impacts, and develop a roadmap for successful execution and delivery.

Let's discuss how Baker's Integrated Project Accelerator Program can bring more value to your next project.
