

Delivering the infrastructure that powers the nuclear fuel cycle.

The expansion of domestic fuel production, enrichment, fabrication, and waste management infrastructure is driving unprecedented demand for a new generation of nuclear facilities. Baker Construction delivers concrete and civil construction solutions that help owners execute complex projects efficiently while meeting the quality, safety, and regulatory expectations of highly regulated environments.

Built for the Next Generation of Nuclear Infrastructure

Modern nuclear development requires faster, more efficient, and more constructible delivery approaches than previous generations of nuclear projects.

As fuel cycle and infrastructure projects accelerate, owners need partners that can combine nuclear-grade quality and compliance with the productivity, scalability, and execution discipline of a self-perform builder. Baker Construction is a concrete and civil construction company built for complex nuclear environments, not a traditional nuclear contractor trying to self-perform concrete.

The Baker Difference

Our model combines the strengths of a national builder with the focus of a specialized contractor:

- Early contractor engagement and construction-forward approach that optimizes budgets and reduces execution risk
- Integrated project delivery backed by national resources and workforce scalability
- Self-perform control that provides accountability and limits coordination challenges
- Scalable quality systems that eliminate bureaucratic layers and operational complexity
- Strategic partnerships that bring specialized expertise to complex project challenges

Nuclear Experience. Expert Guidance.

From enrichment facilities and fuel fabrication plants to waste management infrastructure and supporting industrial assets, Baker helps owners execute critical concrete and civil scopes with greater certainty and control.

Our Integrated Project Accelerator Program helps owners develop an executable strategy that minimizes risk, controls cost, and accelerates project readiness. By engaging early, we can help owners understand the need, evaluate options, quantify impacts, and develop a roadmap for successful execution and delivery.

Let's discuss how Baker's Integrated Project Accelerator Program can bring more value to your next project.
