

STRUCTURAL

BAKER[®]
Construction

**Commercial Concrete
Construction Solutions**

Built to Perform. Backed by Experience.

Reduce risk and unlock more value with Baker Construction at your side, from preconstruction through execution.

When safety, schedule, and quality are non-negotiable, Baker Construction brings the drive, discipline, and technical depth to meet the demand. As the largest concrete contractor in the nation, we offer unmatched expertise that spans projects of all sizes, scopes, and complexity.

With Baker, you gain a team that pushes harder to get it done safer, smarter, faster, and better than anyone else. Our co-workers understand what it takes to execute precision work in even the most demanding environments. Whether we're designing complex formwork systems, building high-profile structures, or sequencing massive pours, we don't just show up — we come prepared.

Diamond-Level Safety Standards

At Baker, safety isn't something we just talk about; it's **something we live every day**. Our Incident and Injury Free (IIF) culture is built on active co-worker involvement, reinforced by a strong foundation of accountability, and supported by rigorous policies and procedures. This commitment is why our Total Recordable Incident Rate (TRIR) consistently surpasses industry benchmarks and why we've earned the Diamond-level rating in the ABC STEP program multiple times.

Quality Without Compromise

Quality is embedded in every phase — not just inspected at the end. We turn complex design documents into clear, actionable work packages, lead thorough preinstallation reviews, and follow proven procedures with relentless oversight. Whether your structure demands high-spec finishes, bold architectural features, or watertight durability, we bring the systems, skill, and grit to deliver lasting results — no matter how tough the challenge.

Right People in the Right Places

With a deep bench of 12,500+ experienced craftworkers and project leaders, we can rapidly deploy teams with the right skills anywhere in the U.S. Unlike contractors who rely on third-party suppliers, Baker's in-house formwork design and fabrication enables faster mobilization and fewer bottlenecks. Combined with our strategically located equipment yards and trusted supplier partnerships, we have the flexibility to circumvent supply-chain disruption, scale quickly, and keep your project moving.

Planning That Drives Predictability

Early involvement helps shape more buildable, cost-effective projects. While others react to issues in the field, we work to resolve them during preconstruction. We support clients with conceptual estimating, value engineering, constructibility reviews, and integrated planning. Using modeling and detailed sequencing, our preconstruction teams identify risks, align resources, and prepare work packages that drive schedule certainty. The result: smarter solutions, better alignment, and a stronger start to every job.

Technology That Sharpens Execution

Advanced modeling and layout tools bring clarity to complex builds. We don't just use technology — we integrate it from the ground up to drive performance. Baker leverages 3D scanning, BIM overlays, 3D printing, and 4D scheduling to bring virtual precision into real-world execution. These tools allow us to visualize the build before it begins, optimize sequencing, and coordinate seamlessly with other trades. Whether we're modeling a high-rise core or coordinating a complex logistics plan, technology gives us the edge to build it right the first time.

Superior Bonding Capacity for Greater Assurance

Baker Construction is backed by the extensive network, technology, and resources of our parent company, Baker Construction Enterprises (BCE). BCE's exceptional bonding capacity enables us to take on projects of any size, safeguarding your investment with the guarantee that we can deliver on time and on budget. We have never walked away from a job.

INDUSTRIES

- COMMERCIAL
- HEALTHCARE
- INFRASTRUCTURE
- INSTITUTIONAL
- RESIDENTIAL/HOSPITALITY
- SPORTS/ENTERTAINMENT

CORE CAPABILITIES

- CONCRETE FORMWORK DESIGN + INSTALLATION
- CONCRETE PLACEMENT + FINISHING
- CONCRETE REINFORCEMENT INSTALLATION
- STRUCTURAL EXCAVATION
